

National Contracting. National Standards. Local Care.

OrthoRehab Total Solutions

OrthoRehab has a Passion for Motion

OrthoRehab, we deliver total solutions for you and your patients, nationwide.

We are the industry's leading supplier of specialty rehabilitation products and services including continuous passive motion (CPM) devices, orthopedic bracing and other associated therapies. Our direct network of Sales Associates and certified Patient Service Representatives provides services nationwide to Physicians, their more than 100,000 patients and the National Payors that process these claims each year.

With a nationwide network of certified specialists, (including ABC training for orthotic fitting registration), you can depend on us for all of your specialty rehabilitation needs. We are passionate about getting patients back into motion!

Post discharge, you can count on the entire OrthoRehab team to provide the therapies and services each patient needs for the best outcomes.

National Contracting.

National Standards.

Local Care.

Our national Patient Service Representative (PSR) network makes us unique.

All of our therapies are delivered through our Patient Service Representatives. Our PSRs are trained to provide patients with CPM, Bracing and other Specialty Rehab therapies according to the highest standards. Specifically, our PSRs provide

- 24 x 7 fitting services — from coast to coast — for a full range of therapies
- Review of Patient Insurance responsibility at time of set up
- Personalized in-service for all prescribed therapy devices
- Review of Physician Protocols to help increase Compliance
- Secondary Follow up calls to check on and monitor Patient progress
- Confirmation of stop date for CPM therapy devices
- 96.3% Patient Satisfaction rating
- National CHAP accreditation
- Finally, as part of our commitment to a Best In Class Quality program, our PSRs have completed the requisite coursework required to be credentialed as ABC Registered Orthotic Fitters.

OrthoRehab partners with hundreds of national Insurance Payors to provide services to Physicians and their more than 100,000 patients. And even though we process hundreds of thousands of annual referrals, we treat each patient like our most important referral.

Our Representatives work with Physicians and their staff to help define the Physician's rehab protocols by procedure. This continuum of care map helps OrthoRehab to quickly move forward in providing the rehab products and solutions patients need — with a single point of contact that works as an extension of your post-op process.

Across the USA, Physicians, Physician Office Managers, Case Managers, Hospital Discharge Planners, or Surgery Schedulers can call our 1.800.RENT.CPM hotline to start their order to provided CPM, Bracing, Cold Therapy and other products to patients for use in the home or hospital.

Next, our Patient Liaisons begin the Insurance benefits inquiry process. Patient Liaison intake specialists understand Insurance Payors, Networks, patient benefits plans, deductibles, co-payments and other plan benefits better than anyone — this speeds pre-authorization and makes certification as seamless as possible.

The order then is pulled from one of our nationwide locations and a Patient Service Representative, who is also ABC trained for registering as an Orthotic Fitter, delivers the CPM and other equipment directly to the hospital or to the home. Equipment

set-up and training are provided to instruct the patient on the length of use for CPM, bracing and cold therapy. State-of-the art compliance monitors on our CPM equipment coupled with our tracking systems help improve outcomes and speed patient's recovery.

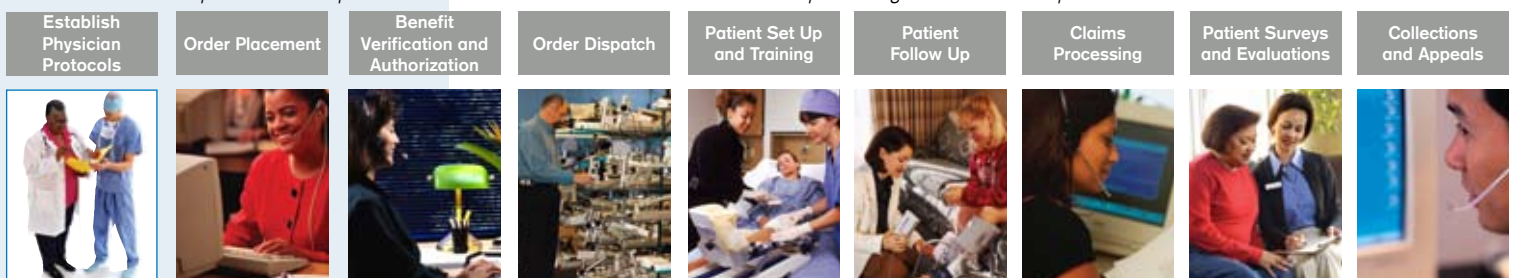

If the Physician requests it, this instruction and compliance tracking can also be provided in the hospital recovery room. Our certified Patient Service Representative can provide the patient with an overview of their in-network co-payment responsibility, so that they understand the process and how the devices are being paid for.

Once the patient is recovered and the equipment is ready for pick up, OrthoRehab schedules all of the details to make this event as convenient as possible for the patient. Our patient care process concludes with the Patient Satisfaction Questionnaire that tells us how well we performed. With this type of consistent feedback, OrthoRehab continues to deliver the market-leading level of patient service that makes us unique in the industry.

Once a patient is through with our rehab services, our Patient Liaisons continue to process the patient's claim with their Insurance Company. During this process, we maintain a close relationship with the Insurance Payor and the Physician's Office Staff to make the patient experience as worry-free as possible.

Find out more: Contact your local OrthoRehab Sales or Service representative at: 1-800-RENT CPM, or send us an email us at info@orthorehab.com

The OrthoRehab total patient solution process — from verification of benefits to final claims processing — makes us unique!

Joint Solutions across the Rehab Continuum

Knee Solutions

- Total Knees Arthroplasty
- Manipulation
- Ligament Reconstruction
- Articular Cartilage Repair
 - Autograft & Allograft
 - Microfracture
 - Chondral Plugs
 - O.A.T.S
 - Carticel Implant
 - Meniscectomy
 - Meniscal Repair

Shoulder Solutions

- Rotator Cuff Repair
- Subacromial Decompression
- Distal Clavicle Excision
- Bankhardt or SLAP Lesion Repair
- Capsular Shift or Thermal Capsular Shift or other Repositioning Luxations
- Total Shoulder Arthroplasty
- Adhesive Capsulitis MUA
- Subcapital Humerus Fractures
- Tendomyopathies of the Shoulder
- Omarthrosis

Wrist/Hand Solutions

- Flexor Tendon Tenolysis
- Tendon Laceration Repair and Revision
- Capsulectomy
- Endoscopic Carpal Ligament Release
- Burns of the Hand and Digits
- Digit Replantation
- Fractures of the Hand
- Dislocations or Post-Operative Irritation
- Joint Instabilities
- Chronic Diseases such as Arthritis

- Peroneal palsies
- Drop foot

What is the Rehab Continuum?

From injury or surgery through the healing process patients have a need for a wide scope of products and services to help them as they progress back to full motion. Each type of surgery has its own specific protocols, products, and therapy needs to ensure the best outcomes for patients...

We call this the rehab continuum.
